Best working manga Studio 5 crack free download full version. Intended for professional users. All the advantages of the professional version are available in the trial mode. But this year, it's not just limited to the Bay Area—November 1 is the start of a US-wide rebellion. The Freedom to Connect protests will be staged all over the US, with a rally at Washington's "People's Park" on November 4, as people rally for net neutrality. At issue is the Federal Communications Commission's plan to end net neutrality rules that limit Internet service providers' freedom to control what you see and do on the web. Over the past year, tech companies have rallied behind the Obama-era rules, arguing that a return to strict rules would let ISPs block websites or throttle certain traffic. The Trump administration is poised to end these rules. Internet service providers like Comcast have campaigned against the rules, arguing that they stifle businesses, increase costs, and hurt innovation. The protest is inspired by the idea that the Internet is a "public trust," not a private asset that big companies should be allowed to change at will. As one of the few, truly democratic public spaces online, the web is underpinned by a set of norms that need to be protected. That's why net neutrality is more than a matter of policy; it's about the way that people understand the Internet. The FCC chairman, Ajit Pai, claims the new rules allow the government to monitor "what consumers are doing online," and that allowing Google and Facebook to implement the rules would be "laughable." But all this goes against a basic principle of how the web works: companies are not allowed to control access to their own services. Protesters supporting net neutrality take part in the "Save the Internet" protest in New York's Times Square on June 29. Undermining the web It's useful to look at net neutrality as a kind of sacred tradition. Net neutrality is about the idea that a network of networks operates in a certain way, and that the ideas and rules of that network are defined in some way by the people who use it. Net neutrality is grounded in the notion of a networked society. We want all of our neighbors to be able to get online. We want them to understand that "the Internet" is something that is open and
